

Saheco offer for the **FOLD TIMBER** folding doors range is extended with the new **SF-A128D** system

Discover the new **Fold SF-A128D** system for folding timber doors

- This is an ideal system for interior divisions because it does not need a lower profile, a property that allows us to leave an obstacle free space when doors are opened.
- The Fold SF-A128D system still follows the philosophy of Saheco RA products: high quality finishes, minimum distance between profile and door, possibility of being installed with false ceiling profile, invisibility of the mechanisms and option of regulation to save irregularities.
- The system allows closing spaces up to 3m with the same doors size.
- It requires a minimum of 2 doors installation and a maximum of 4.
- The system has a limitation of 125 kg per pair of doors.
